1-20 (Canceled)

21. (Currently Amended) A video recording device, comprising:

a first audio source comprising a microphone configured to supply a first audio signal from the microphone onto a storage device;

a second built-in audio source separate from the first audio source and configured to supply a second audio signal from a prerecorded audio device not recorded by the microphone onto the storage device, the second audio source selected from a radio, a cassette tape device, a compact disc device, or a digital audio device such that the second audio device can supply an unlimited selection of second audio signals to the storage device;

a video recording assembly including a video camera in electronic communication with a video recording head;

an audio assembly including ~~an~~ the first and second audio sources in electronic communication with an audio recording head;

an audio activation switch in electronic communication with said second audio source; and

a record button in electronic communication with said video and audio assemblies, said recording device configured such that when said audio ~~source and video assembly are~~ activation switch is energized, activation of said record button simultaneously activates said second audio source and said recording assembly to simultaneously record a
